

The D400 Series

A versatile and simple digital positioner

At VAC we believe "simple is better" —Our microprocessor based D400, with an A/D resolution of 16,000 is kept simple with push button controls, LCD screen, simple menu structure, and can be powered and programmed with a standard loop calibrator. Rotary or linear applications?—No problem. Even our basic business philosophy—product on the shelf for quicker delivery and personnel answering the phone, proves that simple is better.

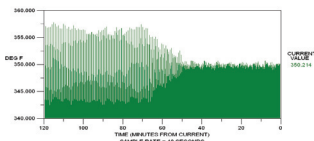

Available in Hart, Foundation Fieldbus, or Profibus in Nema 4X, IS, or EX ratings, this versatile product can be mounted and commissioned in minutes. Micro switches or position feedback can be factory mounted. And our in stock mounting kits add more flexibility and support for this complete product line.

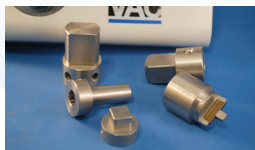

4-20 Feedback and micro switches are available

Simple calibration—push one button twice—a standard loop calibrator is all that is needed—LCD screen

Adaptive control is a unique but standard feature that keeps your "package" accurately tuned to your process, without shutting down the loop.

Flexible mounting with various drive shafts and mounting kits in stock.
