</table>

As well as the instructions in this document, you must also follow the generally applicable accident prevention and safety regulations.

If the information in this document is insufficient in any situation, please contact our service department, who will be happy to help you.

Please read this document carefully before installation and commissioning.
1 Safety summary

1.1 General safety instructions

This chapter provides important instructions for your safety. Thoroughly read and follow these instructions.

Proper and safe operation of the TZIDC-220 positioner requires:

- proper transportation and storage
- mounting, electrical and pneumatic installation and commissioning by qualified personnel (see chapter 1.5, page 10)
- correct operation according to the instructions in this manual
- correct use (see chapter 1.4, page 10)
- careful maintenance

The regulations, standards and directives referred to in this manual are applicable in Germany. When using the TZIDC-220 positioner outside the German jurisdiction, the relevant regulations, standards and directives applicable in the country where the device is used must be observed.

The TZIDC-220 positioner has been designed and tested in accordance with DIN VDE 0411 Part 1 / EN 61 010 Part 1

“Safety Requirements for Electronic Measuring Apparatus”

(based on IEC Publication 348) and has been delivered in a safe condition.

In order to retain the device in a safe condition and ensure safe operation, attentively read and follow the instructions given in the sections marked with the respective symbols. (See “Important information” on page 5.) Otherwise, persons can be endangered or the device itself or other devices or equipment may be damaged or fail.

The device must be shut down and secured reliably against unintentional restart if it must be assumed that safe operation is no longer ensured. Possible reasons for this assumption can be:

- visible damage of the device
- failure of the electrical function
- exposure to a storage temperature of more than 85 °C for a longer time period
- exposure to considerable strain or wear during transport

Only the manufacturer is authorized to repair the device.
1.2 Device-specific safety instructions

1.2.1 General

- Any user-made changes or manipulations of the device are prohibited! Only the manufacturer or an expert for explosion protection are authorized to modify the device.

- Before re-using a TZIDC-220 positioner that has already been used in another installation place always reset the device to the factory setting. Never start the autoadjustment function before having restored the factory setting! Otherwise, hazardous situations may occur due to improper settings.

- Do not use the internal communication interface (X5) on the motherboard when the TZIDC-220 positioner is installed and used in the hazardous area.

- The (optional) safety shutdown module must be subject to a functional test every two years at the latest. Follow the instructions in chapter 3.6.1.

1.2.2 Special instructions for TZIDC-220 positioners of explosion protection type Ex d (type Doc. 901132, type examination certificate DTM 02 ATEX E 029 X)

- Do not open a TZIDC-220 positioner installed and run in a hazardous area directly upon switch-off. Always wait for at least five minutes. Otherwise, some components inside the housing may still be hot and cause an explosion.

- Do not use flammable gas nor oxygen or oxygen-enriched gas as a pressure medium.

- Do not use variants which according to the certificate comply with type of protection “intrinsic safety” intrinsically safe once they have been used in type of protection “flameproof enclosure”.

- Handle the cover with care. Otherwise, the sealing surface may be damaged. This will void the explosion protection (Ex d). Place the removed cover on clean, even surfaces, only! Avoid any pollution of the sealing surface.

- Secure the cable entry against turning and loosening by using security adhesive of medium strength (see chapter 3.3.4, page 23).

- If the positioner is used at an ambient temperature above 60 °C (140 °F) or below -20 °C (-4 °F), use cable entries and cables approved for a service temperature corresponding to the maximum ambient temperature increased by 10 K or corresponding to the minimum ambient temperature, respectively.
1.2.3 Pneumatic safety

- Observe the safety instructions for the pneumatic actuator used. The actuator's high actuating power may cause injuries!
- Take suitable precautions to ensure that even in case of malfunctions the positioner's max. admissible operating pressure of 6 bar (90 psi) is not exceeded. Otherwise, the positioner and/or the actuator may be damaged.
- The positioner must be supplied with instrument air exempt from oil, water and dust according to DIN/ISO 8573-1, Class 3
  - Purity: max. particle size 5 µm, max. particle density 5 mg/m³
  - Oil content: max. concentration 1 mg/m³
  - Pressure dew point: maximum value 10 K below operating temp.

Before connecting the air pipes blow them out to remove dust, splinters and other particles.

1.2.4 Electrical safety

- Observe the common VDE safety regulations and the accident prevention rules of the Employers Liability Insurance Association.
- Observe the common standards and safety regulations for the installation and operation of electrical systems.
- When connecting the device, observe all electrical specifications in these operating instructions or in the data sheet.
- For the electrical installation of explosion-protected devices, observe all standards, regulations and directives governing explosion protection and applicable for the construction and use of explosion-protected systems, especially the DIN/VDE directives, the directives for explosion protection (VDE 0165 or EN 60079), and the special requirements and specifications for your devices (see the following chapter "Explosion protection" and chapter "Certificates" starting on page 40).
- Exclusively power devices with explosion protection via an electrically isolated circuit with safe extra-low voltage (SELV) in accordance with EN 60 950.

Power supply

- The basic device is bus-powered via the Fieldbus connected to the bus terminals +(11) and -(12). The option modules have to be supplied separately.
- When connecting a power source for test purposes without establishing a bus communication (e.g. when executing the Autoadjust function), a supply voltage between 9.0 V DC and a maximum of 32 V DC can be applied.
1.3 Explosion protection

One of the type plates seen below is attached to the positioner to the left of the main type plate, depending on the positioner's explosion protection. It indicates the degree of explosion protection and the certificate valid for your positioner. For details please refer to chapter "Certificates" starting on page 40.

Always observe the specifications and special requirements for your positioner stipulated in the applicable certificate.

**NOTICE**

- Do not run bus/signal lines close to power lines. Power lines produce interference in their near vicinity which may affect the electrical capabilities of the bus/signal lines.
- In order to ensure electromagnetic compatibility (EMC), always use shielded cables conforming to the standards for the bus lines. When running the device with the option modules (proximity switches, microswitches, shutdown module) use shielded cables for these modules as well. All cable shields must be kept as short as possible and have to be connected to protective ground on both sides (use the grounding screw in the TZIDC-220 connection compartment on the device side).
- Keep the case closed. When the case is open, the positioning action may be affected through electromagnetic interference. This may result in a permanent positioning error, especially when the Autoadjust function is performed with the case open.

**WARNING**

Always observe the specifications and special requirements for your positioner stipulated in the applicable certificate.

---

**Fig. 1** Type plate indicating the degree of explosion protection
1.4 Correct use
The TZIDC-220 positioner is an electro-pneumatic positioner with flameproof enclosure for pneumatic final control elements. It is designed for being attached to linear and rotary actuators following the instructions in this manual. The positioner may be used only for the applications listed in these operating instructions or in the data sheet 18-0.34 EN. Any other use is considered as incorrect.

The signal current circuit and the input and output circuitry must meet the explosion protection requirements stipulated in the certificates (see chapter "Certificates" starting on page 40).

The maximum permissible ambient temperature range of -40 °C to +85 °C (when using proximity switches of type SJ2-S1N (NO): -25 °C to + 85 °C) must not be exceeded.

1.5 Qualified personnel
Only those persons familiar with the installation, commissioning, operation and maintenance of the TZIDC-220 positioner or similar instruments who have the required qualification and have read and understood the operating instructions are authorized to work on the TZIDC-220 positioner. These persons must be sufficiently trained and experienced and know the relevant standards and regulations to be able to judge their assigned tasks and recognize potential hazards. Only persons who are qualified or have been trained adequately and who have the required certificates are authorized to work on explosion-protected devices.

2 Manufacturer's information

2.1 Delivery
When receiving the delivery please immediately check items and scope for intactness and completeness. The scope of delivery is stated in the shipping documents. If ordered, the accessories (e.g. mounting material, pressure gauge block, filter regulator) are added to the delivery as individual items. Check items and scope of the delivery by means of the catalog numbers to see if types and quantities are in accordance with your order. If the positioner is delivered already mounted to the actuator, the positioner, accessories and actuator or final control element are considered as a common delivery item. A list of catalog numbers and details of the different versions and accessories can be found in data sheet 18-0.34 EN.

2.2 CE compliance information
We declare that we are the manufacturer of the TZIDC-220 positioner and that the product conforms with the EMC Directive 89/336/CEE as of May 1989 and meets the requirements of the following standards:

- EN 55022:1998 "Information technology equipment, Radio disturbance characteristics, Limits and methods of measurement"
- EN 61000-6-2:8/2002 "Electromagnetic compatibility (EMC) Part 6-2: Generic standards - Immunity for industrial environments"

The TZIDC-220 positioner complies with the EC directive for CE conformity certification.
3 Installing and commissioning

3.1 Mechanical mounting

3.1.1 General

The arrow (1) on the feedback shaft (and thus the lever) must travel within the area marked with the small arrows (2).

![Operating range diagram](image1)

Fig. 2 Operating range

When mounting the positioner, ensure that the transfer of the stroke or rotation angle for the position feedback is correct. The maximum rotation angle is 60° for mounting to linear actuators and 120° for mounting to rotary actuators. The minimum angle is always 25°.

![Positioner ranges diagram](image2)

Fig. 3 Positioner ranges
3.1.2 Operating conditions at the installation site

Before installing check to ensure that the specifications in terms of safety and control applicable to the TZIDC-220 positioner will not be exceeded at the installation site of the actuator or final control element.

**WARNING**

Ambient temperature: -40 °C ... +85 °C (-25 °C ... + 85 °C when using proximity switches of type SJ2-S1N (NO))

Relative humidity: 95 % (mean annual value), condensation permissible. Observe the specifications for protection class IP65 / NEMA 4X and the technical data in this manual.

Explosion protection: Observe the technical data, and the specifications in the certificates (see the relevant sections of this manual).

Mounting orientation: any orientation allowed

3.1.3 Mounting the positioner to linear actuators

A special attachment kit is available for mounting the positioner to a linear actuator according to DIN/IEC 534 (lateral mounting to NAMUR) comprising the following parts:

- Lever (1.0) with follower pin, for 10 ... 35 mm or for 20 ... 100 mm actuator travel
- Follower guide (2.0) with two screws (2.1), spring washers (2.2), and clamp plates (2.3)
- Angle bracket (3.0) with two screws (3.1), and two plain washers (3.2)
- Screw (3.4) and plain washer (3.5) for mounting to cast iron yoke
- Two U-bolts (3.7), each with two plain washers (3.8), and two nuts (3.9) for mounting to columnar yoke

Fig. 4 Mounting kit for linear actuators

Tools required: Wrench 10 mm /13 mm
Allen key 4 mm
Follow the procedure (steps 1 - 5) below to attach the positioner to a linear actuator:

1. Mount the follower guide to the actuator

   • Fasten the follower guide (1) and the clamp plates (2) with screws (4) and spring washers (3) to the spindle of the actuator; hand-tighten the screws.

   ![Fig. 5 Mounting follower guide to actuator](image)

2. Assemble the lever (if not yet pre-assembled)

   • Slip the spring (2) onto the bolt with the follower pin (1).
   • Slip the plastic washer (3) onto the bolt and compress the spring with it.
   • Insert the bolt with compressed spring into the oblong hole in the lever (4) and fasten it in the desired position using the plain washer (5) and nut (6) at the lever; the scale on the lever indicates the link point for the stroke range.
   • Slip the plain washer (8) onto the screw (7), insert the screw into the lever and counter with the nut (9).

   ![Fig. 6 Assembling the lever](image)
3. Mount the lever and the angle bracket to the positioner

- Attach the lever (1) to the positioner's feedback shaft (2) (can only be mounted in one position due to the flat on the side of the feedback shaft).
- Check whether the lever travels within the operating range (between the arrows) by observing the arrow marks (3).
- Hand-tighten the screw (4) at the lever.
- Hold the preassembled positioner with the angle bracket (5) still loose in such a way against the actuator that the follower pin on the lever introduces into the follower guide, in order to determine the bore holes of the positioner to be used for the angle bracket.
- Fasten the angle bracket (5) with screws (6), and plain washers (7) to the corresponding bore holes in the positioner case; if possible, tighten the screws evenly to ensure linearity during operation. Align the angle bracket in the oblong hole to achieve a symmetrical operating range (between the arrow marks (3)).
4.a Mount the positioner to a cast iron yoke

- Fasten the angle bracket (1) with screw (2), plain washer (3) to the cast iron yoke (4).

Fig. 8 Mounting to cast iron yoke

or

4.b Mount the positioner to a columnar yoke

- Hold the angle bracket (1) in the appropriate position against the columnar yoke (2).
- Insert the U-bolts (3) from the inner side of the columnar yoke through the holes in the angle bracket.
- Slip on the plain washers (4), and nuts (5). Hand-tighten the nuts evenly.

Fig. 9 Mounting to columnar yoke

**IMPORTANT** Adjust the height of the positioner at the cast iron yoke or the columnar yoke until the lever is horizontal (at visual check) at half valve stroke.

**IMPORTANT** Check the unit for proper mounting after having made the pneumatic and electrical connection (see chapter "Commissioning" on page 26).
5. Adjust the stroke

The scale on the lever indicates the relevant points for the various valve stroke ranges.

You can adapt the valve stroke range to the operating range of the position sensor by shifting the bolt with follower pin in the oblong bore hole of the lever. When the link point is shifted to the inside, the position sensor’s rotation angle is increased; shifting to the outside decreases the angle.

Set the stroke range in such a way that the used rotation angle of the position sensor is as great and as symmetrical around the center position as possible.

Recommended range for linear actuators: between -28° and +28°
Minimum angle: 25°

After mounting, check whether the positioner operates within the sensor range.

IMPORTANT Check the unit for proper mounting after having made the pneumatic and electrical connection (see chapter "Commissioning" on page 26).
3.1.4 Mounting the positioner to rotary actuators

The following mounting kit is available for mounting to a rotary actuator according to VDI/ VDE 3845:

- Adapter (1.0) with spring (1.4)
- Four screws, M6 (1.1), four spring washers (1.2), and four plain washers (1.3) for fastening the bracket (2.0) to the positioner
- Mounting bracket (2.0)
- Four screws, M5 (2.1), four spring washers (2.2), and four plain washers (2.3) for fastening the bracket to the actuator

Fig. 11 Mounting kit for rotary actuators

Tools required: Wrench 10 mm /13 mm
Allen key 3 mm
Follow the procedure (steps 1 - 3) below to attach the positioner to a rotary actuator:

1. Mount the adapter to the positioner

   - Determine the mounting position (in parallel to the actuator or shifted by 90°).
   - Determine the direction of rotation of the actuator (clockwise or counterclockwise).
   - Move the rotary actuator to its home position.
   - On the basis of the mounting position, the home position, and the direction of rotation it must be determined in which position the feedback shaft (1) of the positioner must be pre-adjusted and in which position the adapter (2) must be placed, to enable the positioner to travel within the correct range (the arrow on the rear of the device must travel within the admissible range, for details see Fig. 2 on page 11).
   - Pre-adjust the feedback shaft.
   - Place the adapter on the feedback shaft in the appropriate position and fix it by setscrews (3); ensure that one of the setscrews is engaged on the side of the feedback shaft with the flat.

![Fig. 12 Mounting the adapter](image)

2. Attach the mounting bracket (1) to the positioner

![Fig. 13 Attaching the mounting bracket to the positioner](image)
3. Attach the positioner to the actuator

Fig. 14 Attaching the positioner to the actuator

After mounting, check whether the actuator's operating range is in accordance with the positioner's sensor range.

**IMPORTANT** Check the unit for proper mounting after having made the pneumatic and electrical connection (see chapter "Commissioning" on page 26).
3.2 Pneumatic connection

3.2.1 Safety instructions

- Observe the safety instructions for the pneumatic actuator used. The actuator's high actuating power may cause injuries!

- Take suitable precautions to ensure that even in case of malfunctions the positioner's max. admissible operating pressure of 6 bar (90 psi) is not exceeded. Otherwise, the positioner and/or the actuator may be damaged.

- The positioner must be supplied with instrument air exempt from oil, water and dust according to DIN/ISO 8573-1, Class 3
  - Purity: max. particle size 5 µm, max. particle density 5 mg/m³
  - Oil content: max. concentration 1 mg/m³
  - Pressure dew point: maximum value 10 K below operating temp.

Before connecting the air pipes blow them out to remove dust, splinters and other particles.

3.2.2 Making the pneumatic connections

![Pneumatic connections](image_url)

All pneumatic piping connections are located on the right-hand side of the positioner. Threaded bores G 1/4 or 1/4-18 NPT, respectively, are provided. The positioner is labeled according to the type of thread. The corresponding screwed pipe connections have to be supplied by the customer. We recommend pipes with the dimension 6 x 1 mm for the pneumatic piping.

The amount of supply pressure has to be matched to the working pressure necessary for the actuation. The positioner's operating range is between 1.4 and 6 bar.
The connections have to be arranged, according to their marks, in the following way:

<table>
<thead>
<tr>
<th>Mark</th>
<th>Connection piping</th>
</tr>
</thead>
<tbody>
<tr>
<td>-</td>
<td>Air supply, pressure 1.4...6 bar (20...90 psi)</td>
</tr>
<tr>
<td>OUT1</td>
<td>Output pressure, to actuator</td>
</tr>
<tr>
<td>OUT2</td>
<td>Output pressure, to actuator (for double-acting actuators)</td>
</tr>
</tbody>
</table>

### 3.3 Electrical connection

#### 3.3.1 Safety instructions

- Observe the common VDE safety regulations and the accident prevention rules of the Employers Liability Insurance Association
- Observe the common standards and safety regulations for the installation and operation of electrical systems.
- When connecting the device, observe all electrical specifications in these operating instructions or in the data sheet.
- For the electrical installation of explosion-protected devices, observe all standards, regulations and directives governing explosion protection and applicable for the construction and use of explosion-protected systems, especially the DIN/VDE directives, the directives for explosion protection (VDE 0165 or EN 60079), and the special requirements and specifications for your devices (see chapter "Certificates" starting on page 40).
- Exclusively power devices with explosion protection via an electrically isolated circuit with safe extra-low voltage (SELV) in accordance with EN 60 950.

#### 3.3.2 General installation instructions

Observe the following instructions. They are essential to proper operation and functionality of the positioner.

**General**
- Do not expose the terminals to strain.

**Technical data**
- When connecting the device, make sure that the electrical specifications in chapter 4 "Technical data" are observed.

**Power supply**
- The basic device is bus-powered via the Fieldbus connected to the bus terminals +(11)/-(12). The option modules must be supplied separately.
- When connecting a power source for test purposes without establishing a bus communication (e.g. when executing the Autoadjust function), a supply voltage between 9.0 V DC and a maximum of 32 V DC can be applied.
Electromagnetic interference

- Do not run bus/signal lines close to power lines. Power lines produce interference in their near vicinity which may affect the electrical capabilities of the bus/signal lines.
- Always use shielded cables conforming to the standards for the bus lines, to ensure electromagnetic compatibility (EMC). When running the device with the option modules (proximity switches, microswitches, shutdown module) use shielded cables for these modules as well. All cable shields must be kept as short as possible and have to be connected to protective ground on both sides (use the grounding screw in the TZIDC-220 connection compartment on the device side).
- Keep the case closed. Otherwise, the positioning action may be affected through EMI, resulting in a permanent positioning error, especially when the *Autoadjust* function is performed with the case open.

3.3.3 Overview

Two threaded bore holes 1/2 - 14 NPT or M20 x 1.5 are available on the left hand side as the cable entry into the case. One is equipped with a cable gland and in the other a pipe plug is mounted.

The screw terminals inside the case are assigned as follows:

1. Not used
2. Service switch for the shutdown module
3. Terminals for the shutdown module
4. Kit for digital position feedback, either proximity switches or 24 V micro-switches
5. Same as 4
6. Bus terminals
7. Grounding screw
3.3.4 Making the electrical connections

1. Mount the cable gland

Exclusively use EMC cable glands with full Ex-d approval for EEx d operation. Do not use partly approved cable glands labeled "U". They are NOT sufficient. The cable shield has to be applied in the cable entry.

Approved cable glands are available from ABB for 1/2 NPT or M20 x 1.5 threads.

Screw in the appropriate Ex-d cable gland and fix it with glue to secure it against loosening. Loctite 242 or similar glues are suitable.

Proceed as seen in the illustrations below:

![Fig. 18 Fastening the cable gland 1/2 NPT](image)

Apply the glue (Loctite 242 or similar) to the two last thread windings, approximately 7 mm from the end of the thread (see gray arrow in the illustration).

Insert the cable gland in the threaded hole of the positioner housing and fasten it with the appropriate tool.

![Fig. 19 Fastening the cable gland M20 x 1.5](image)

Apply the glue (Loctite 242 or similar) to the two last thread windings, seen from the end of the thread (see gray arrow in the illustration).

Screw the cable gland into the threaded hole of the positioner housing until reaching the end stop.
2. Connect the wires to the terminals

- Remove approximately 8 mm of the insulation.
- When connecting the bus lines, shutdown module, proximity switches or microswitches, insert the wire ends from the left into the appropriate screw terminal and hand-tighten the screws (access from above).

---

**Option 1: Position switches**

- Proximity switches
- Supply 5...11VDC
- Signal L ≤ 1mA, H ≥ 2 mA

---

**Option 2**

- Shutdown module
- 24V (20V...30V)

---

**Microswitches**

- max. 24V, max. 2A

---

**Fieldbus, bus powered**

- 9...32V

---

Keep cable shields as short as possible and connect to ground on both sides

---

*Fig. 20 Wiring diagram*
3.4 Setting jumpers on the motherboard

Two jumpers can be set on the motherboard to enable/disable simulation or write access. Set the jumpers according to your needs as seen in the illustration below:

![Jumper Setting Diagram]

Default setting (acc. to FIELDBUS Foundation standard):

- Simulation disabled
- Write-access enabled

**Fig. 21 Jumper setting**
3.5 Commissioning

**Important**
The prerequisite for proper operation of the TZIDC-220 positioner on the bus is that the Transducer Block can change over to AUTO mode. This requires that the operating range of both the positioner and the valve be matched to each other (as described in step 5 of the procedure below). If this auto-adjustment should fail or cannot be performed for any reason, the Transducer Block remains in “Out of Service” mode and the configuration bit in the “BLOCK-ERR Parameter” is “active”.

3.5.1 Procedure

1. Turn on the air supply to the positioner.
2. Connect the bus with arbitrary polarity (or auxiliary power 9 V DC ... 32 V DC) to the bus terminals.

   ![Remote Display](image)

   is displayed.

3. Check for proper mounting:
   - Press and hold **MODE** and **ENTER** simultaneously. Wait until the countdown has run down from 3 to 0, then release **MODE** and **ENTER**. The operating level (mode 1.x) is reached and indicated.
   - Press and hold **MODE**.
   - Additionally briefly press ↑ or ↓ until mode 1.3 (manual adjustment within the sensor range) is displayed.
   - Release **MODE**.
   - Press ↑ or ↓ to move the actuator to its mechanical limit stops in both directions, and note the values. The angle of rotation is indicated in degrees.

   **Recommended range:**
   - between -28° and +28° for linear actuators
   - between -57° and +57° for rotary actuators
   - **Minimum angle:** 25°

   **IMPORTANT**
The positioner should be mounted/adjusted in such a way that the portions of the sensor's operating range above and below the center point are nearly identical. Make sure to use the rotation angle of the position sensor in the positioner to its utmost extent. Refer to chapter 3.1 "Mechanical mounting" for details about how to readjust/correct if required.

4. Return to the remote level.
   - Press and hold **MODE** and **ENTER**.
   - Wait until the countdown has run down from 3 to 0, then release **MODE** and **ENTER**.

   ![Remote Display](image)

   is displayed.
5. Run the standard Autoadjustment function.
   - Make sure that the remote level is activated.

   **For linear actuators**¹:
   - Press and hold MODE. Wait until the countdown has run down from 5 to 0, then release MODE.
   - Press and hold MODE again until the countdown has run down from 3 to 0, then release MODE.

   Standard Autoadjustment is started automatically, and the progress is displayed.

   **For rotary actuators**¹
   - Press and hold ENTER.
     - \(\text{conf} \quad 2.00 \quad \text{TZ Inc FF} \) is displayed.
     - Wait until the display has changed to \(\text{conf} \quad 2.00 \quad \text{func \_Rot} \).
     - Release ENTER.
     - Press and hold ENTER again until the countdown has run down from 3 to 0.
     - Release ENTER.

     Standard Autoadjustment is started automatically, and the progress is displayed. When standard Autoadjustment has completed successfully, the determined parameters are saved automatically, and the remote level is activated again. If, however, an error should occur during standard Autoadjustment, error code 255 is briefly indicated. The device then automatically changes over to parameter P1.1 Autoadjust (custom autoadjustment) at the configuration level.

   - Press and hold MODE.
   - Additionally, briefly press \(\text{up} \) or \(\text{down} \) several times until \(\text{conf} \quad \text{P 1 5} \quad \text{EXIT} \) is displayed.
   - Release MODE. CANCEL is displayed. If not, briefly press \(\text{up} \) or \(\text{down} \).
   - Press and hold ENTER until the countdown has run down from 3 to 0.

   The positioner automatically returns to the operating level. Press and hold MODE and additionally briefly press \(\text{up} \) twice to reach operating mode 1.3 “Manual adjustment within the sensor range”. Then check the positioner-actuator assembly for proper mounting. Re-adjust if required (see chapter 3.1.3 or chapter 3.1.4 for details) and then start standard Autoadjustment again.

---

¹ The zero position is automatically determined and saved by the standard autoadjustment function: turning counter-clockwise (CTCLOCKW) for linear and clockwise (CLOCKW) for rotary actuators.
3.5.2 Requesting bus information

Additional information about the bus can be called up for display by briefly pressing the buttons shown in the table when bus mode is active (i.e. the following display is seen):

![Remote Display]

<table>
<thead>
<tr>
<th>Buttons pressed</th>
<th>Command/Action</th>
</tr>
</thead>
</table>
| ![Up Arrow]     | **Show setpoint value and state.**  
The display shows the last valid setpoint value (SP_VALUE) and state (SP_STATE) from the transducer block for two seconds, each. Then the REMOTE display is seen again.  
The setpoint value is indicated as a percentage.  
The setpoint state is indicated as a code number, meaning the following: |
| ![Up Arrow]     | **Code** | **Meaning (Status, sub-status, details)** |
| ![Up Arrow]     | 28     | Bad, OutOfService, NotLimited |
| ![Up Arrow]     | 73     | Uncertain, SubstituteValue, LowLimited |
| ![Up Arrow]     | 74     | Uncertain, SubstituteValue, HighLimited |
| ![Up Arrow]     | 75     | Uncertain, SubstituteValue, Constant |
| ![Up Arrow]     | 79     | Uncertain, InitialValue, Constant |
| ![Up Arrow]     | 192    | GoodCascade, NonSpecific, NotLimited |
| ![Up Arrow]     | 224    | GoodCascade, InitiateFaultState, NotLimited |
| ![Down Arrow]   | **Show current block mode.**  
The display shows the current mode of the AO function block and the transducer block for approximately two seconds, each.  
Then the REMOTE display is seen again. |
| ![Down Arrow]   | The AO function block may have the following modes:

IMAN_AO Initialization Manual of AO block  
AUTO_AO Automatic AO block  
MAN_AO Manual AO block  
CAS_AO Cascade AO block  
LO_AO Local Override AO block  
RCAS_AO Remote Cascade AO block  
ROUT_AO Remote Output AO block |
| ![Down Arrow]   | The transducer block may have the following modes:  
OOS_TB TB out of service  
AUTO_TB Automatic TB |
| ![Enter]        | **Show software revision level and device type** |

28 Electro-pneumatic positioner TZIDC-220 42/18-82 EN
3.5.3 Local operation (bus device)

Procedure for mode selection from operating level:

1. Press and hold MODE.
2. Additionally briefly press ↑ as often as required.
   The selected operating mode is indicated.
3. Release MODE.
4. The position is indicated as a percentage or rotation angle.

Overview

<table>

*) Positioning not active

**) For quick motion: Press ↑ and ↓ together.
3.5.4 Parameter setting example

An overview of the parameter settings that can be changed via the front panel keypad is found in Appendix A.

IMPORTANT

"Changing zero position (of the LCD) from clockwise to counter-clockwise"

Starting situation: the positioner is operating remote-controlled.

1. Change over from the remote level to the operating level:
   - Press and hold MODE and ENTER simultaneously.
   - Wait until the countdown has run down from 3 to 0.
   - Release MODE and ENTER. Mode 1.1 is reached and indicated.

2. Change over to the configuration level:
   - Simultaneously press and hold ↑ and ↓.
   - In addition, briefly press ENTER.
   - Wait until countdown from 3 to 0 has run down.
   - Release ↑ and ↓.

3. Change over to parameter group 3.2:
   - Simultaneously press and hold MODE and ENTER.
   - In addition 2 x briefly press ↑.

4. Select parameter 3.2 "Zero position":
   - Press and hold MODE.
   - In addition, 2 x briefly press ↑.
5. Change parameter setting:
   - Briefly press ↑ to select "CTCLOCKW".

6. Change over to parameter 3.3 "EXIT" and save the new setting:
   - Press and hold MODE.
   - In addition, 1 x briefly press ↑.
   - Release MODE.
   - Briefly press ↑ to select "NV_SAVE.
   - Press and hold ENTER until the displayed countdown from 3 to 0 has run down.
   - The positioner saves the new settings and automatically returns to the operating level.

7. Return to the remote level.
   - Press and hold MODE and ENTER.
   - Wait until the countdown has run down from 3 to 0.
   - Release MODE and ENTER.
   - is displayed (percentage is an example)

3.6 Functional test / maintenance

Do not make any changes to devices with explosion protection.

WARNING

You should be aware of the fact that the positioner's warranty will expire immediately if you should modify or manipulate the electronics of a positioner without explosion protection.

IMPORTANT

The TZIDC-220 positioner is virtually maintenance free.

To ensure error-free and maintenance-free operation always supply the positioner with instrument air exempt from oil, water and dust according to DIN/ISO 8573-1 (purity and oil content acc. to Class 3, pressure dew point 10 K below the operating temperature).

We recommend to check the integrated air filter on a regular basis and replace it if required.
If the optionally installed filter regulator is installed, it has to be checked regularly as well. Additionally, the control position should be checked periodically for conformity with the tolerance limit.

3.6.1 Functional test of the shutdown module

If the optional shutdown module is used, it must be subject to a functional test every two years at the latest to ensure full operational reliability in compliance with DIN V 19250. Otherwise, the AK4 approval will lapse.

**WARNING**

Do not perform this test in a potentially hazardous atmosphere, as the case must be opened for testing. Either test the positioner in the workshop or lab or make sure that there is no explosion hazard.

Proceed as described below:

1. Remove the cover.

**WARNING**

Handle the cover with care! Otherwise, the sealing surface may be damaged. This will void the explosion protection (Ex d).

Grab the cover in the middle when opening. Do not cant! Place the cover on clean, even surfaces only! Avoid any pollution of the sealing surface.

2. Alternately set the slide switch (1) from the "On" position in the middle to the top and bottom position ("Off1" or "Off2") and check that the actuator is depresurized properly.

![Fig. 22 Slide switch (service switch) of the shutdown module](image)

3. Set the slide switch to the "On" position in the middle again.

4. Replace the cover.

</tbody>
</table>

#### Support of self-tuning

Supports self-tuning of the working range on the valve. Control loop “self-tuning” through the PID function block is not supported.

#### Delivery state

The positioner is delivered in an unadjusted state. The standard autoadjustment function has to be run to adapt the working range and control parameters. Otherwise the transducer block will remain in “Out of service” mode.

#### Diagnostic capabilities

Self-diagnostic of positioner hardware and software. Basic valve diagnostics incl. extended alarm handling.
4.2 Basic model

Name
Device tag
ABB POSITIONER TZIDC-120 xxxxxx

Device ID
0003200028______TZIDC-120 xxxxxx

Device address
Between 10 and 247, default node address 23

Output

Range
0...6 bar (0...90 psi)

Air capacity
at supply pressure of 1.4 bar (20 psi)
5.0 kg/h = 3.9 Nm\(^3\)/h = 2.3 scfm
at supply pressure of 6 bar (90 psi)
13 kg/h = 10 Nm\(^3\)/h = 6.0 scfm
(Booster, for increasing air capacity, on request)

Output function
for single or double acting actuators,
air is vented from actuator or actuator is blocked in case of an electrical power failure

Shut-off values
end position 0 % = 0...45 %
end position 100 % = 55...100 %

Travel

Angle of rotation
Used range 25...120 ° (rotary actuators, optionally 270°)
25...60 ° (linear actuators)

Travel time prolongation
Range of 0...200 seconds, separately for each direction

Air supply

Instrument air
free of oil, water and dust to DIN/ISO 8573-1
pollution and oil content according to Class 3
purity: max. particle size 5 μm, max. particle density 5 mg/m\(^3\);
oil content: max. concentration 1 mg/m\(^3\);
pressure dew point: 10 K below operating temperature

Supply pressure
1.4...6 bar (20...90 psi)

NOTICE: Do not exceed the actuator’s max. operating pressure!

Air consumption
< 0.1 kg/h (0.05 scfm) (independent of supply pressure)
Transmission data and influences

Output pressure (OUT 1)
- Increasing: increasing signal 0...100%
  increasing output pressure OUT 1
- Decreasing: increasing signal 0...100%
  decreasing output pressure OUT 1

Characteristic deviation
≤ 0.5%

Tolerance band
0.3...10%, adjustable

Dead band
0.1...10%, adjustable

Resolution (A/D conversion)
> 16,000 steps

Sample rate
20 msec

Influence of ambient temperature
≤ 0.5% for every 10 °C change in temperature

Influence of vibration
≤ +/-1% up to 10 g and 80 Hz

Seismic requirements
Meets requirements of DIN/IEC 68-3-3 Class III for strong and strongest earthquakes

Influence of mounting orientation
No effect

Meets the requirements of the following directives
EMC Directive 89/336/EEC as of May 1989
EC Directive for CE conformity marking

Environmental capabilities

Ambient temperature
- -40 °C to +85 °C for operation, storage and transport
- -25 °C to +85 °C when using proximity switches SJ2-S1N (NO)

Relative humidity
Operational (with closed case and air supply switched on):
95% (annual average), condensation permissible
Transport and storage:
75% (annual average), non-condensing
Case

Material/Protections
Aluminum, protection class IP 65 (NEMA 4X)

Surface/color
Electrostatic dipping varnish with epoxy resin, stove-hardened
Case varnished black, RAL 9005, matt,
Cap Pantone 420

Electrical connections
Screw terminals:
max. 1.0 mm² for options, max. 2.5 mm² for bus connection
NOTICE: Do not expose the terminals to strain!
Cable entry
2 threads 1/2-14 NPT or M20x1.5
for cable diameter 6...12 mm
(cable gland or pipe plug must be ordered separately)

Pneumatic connections
Threads G 1/4 or 1/4-18 NPT

Weight
3.0 kg

Mounting orientation
any orientation allowed

Dimensions
see dimensional drawings in data sheet 10/18-0.34 EN

42/18-82 EN  Electro-pneumatic positioner TZIDC-220
4.3 Options

Module for the shutdown function

Supply voltage 24 V DC (20...30 V DC) (electrically isolated from the input signal)
Safe position is activated when voltage < 5 V
AK approval AK 4 to DIN V 19250
Test report No. 101/S01/148
Explosion protection see chapter "Certificates" starting on page 40

A separate 24 V DC signal is normally applied to the shutdown module, which connects through the signal from the microprocessor to the I/P module. When the 24 V DC signal is interrupted, the I/P module executes the respective safety function, depending on the mechanical construction.

Fail safe:
The positioner output 1 is depressurized, and the valve moves to the safe position. In case of a double-acting actuator the second output is additionally pressurized.

Fail-freeze:
The pneumatic output 1 is closed, and the valve “freezes” in its current position. In case of a double-acting actuator both outputs are closed.

The shutdown module works independently of the mother board, i.e. all information from the final control element is available in the supervisory process control system at any time.

Digital position feedback with proximity switches 1

2 proximity switches for independent position signaling.
Switching points adjustable between 0 and 100 %
Current circuits to DIN 19234 / NAMUR
Supply voltage 5...11 V DC
Signal current < 1 mA logical "0"
Signal current > 2 mA logical "1"

Direction of action (logical state):

<table>
<thead>
<tr>

EC-TYPE EXAMINATION CERTIFICATE

Equipment or protective system intended for use in potentially explosive atmospheres - Directive 94/9/EC

EC-Type Examination Certificate Number

TÜV 02 ATEX 1834 X

Equipment: Positioner type TZID-C120 resp. TZID-C220
Manufacturer: ABB Automation Products GmbH
Address: Schillerstrasse 72
D-32425 Minden

This equipment or protective system and any acceptable variation thereto is specified in the schedule to this certificate and the documents therein referred to.

The TÜV NORD CERT GmbH & Co. KG, TÜV CERT-Certification Body, notified body number N° 0032 in accordance with Article 9 of the Council Directive of the EC of March 23, 1994 (94/9/EC), certifies that this equipment or protective system has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres given in Annex II to the Directive.

The examination and test results are recorded in the confidential report N° 02 YEX 164933.

Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

EN 50 014:1997  EN 50 020:1994

If the sign "X" is placed after the certificate number, it indicates that the equipment or protective system is subject to special conditions for safe use specified in the schedule to this certificate.

This EC-type examination certificate relates only to the design, examination and tests of the specified equipment in accordance to the Directive 94/9/EC. Further requirements of the Directive apply to the manufacturing process and supply of this equipment. These are not covered by this certificate.

The marking of the equipment or protective system must include the following:

II 2 G EEx ia IIC T6

page 1/3
EC-TYPE EXAMINATION CERTIFICATE N° TÜV 02 ATEX 1834 X

Description of equipment

The positioner type TZID-C120 resp. TZID-C220 is used for the control resp. closed loop control of pneumatically driven valves. The reference value is transmitted via field bus. A integrated position sensor detects the current position of the valve drive.

An integrated current/pressure transformer (I/P) is used for the control of the pneumatic auxiliary power.

The permissible ambient temperature range in dependence on the temperature class has to be taken from the following table:

<table>
<thead>
<tr>
<th>Temperature class</th>
<th>Ambient temperature range</th>
</tr>
</thead>
<tbody>
<tr>
<td>T4</td>
<td>- 40 °C to + 85 °C</td>
</tr>
<tr>
<td>T5</td>
<td>- 40 °C to + 55 °C</td>
</tr>

EC-Type Examination Certificate

- Directive 94/9/EC -
Equipment and protective systems intended for use in potentially explosive atmospheres

DMT 02 ATEX E 029 X

Equipment: Stellungsregler Type Doc. 901132
Manufacturer: ABB Automation Products GmbH
Address: D 32425 Minden

The design and construction of this equipment and any acceptable variation thereto are specified in the schedule to this type examination certificate.

The certification body of Deutsche Montan Technologie GmbH, notified body no. 0158 in accordance with Article 9 of the Directive 94/9/EC of the European Parliament and the Council of 23 March 1994, certifies that this equipment has been found to comply with the Essential Health and Safety Requirements relating to the design and construction of equipment and protective systems intended for use in potentially explosive atmospheres, given in Annex II to the Directive. The examination and test results are recorded in the test and assessment report BVS PP 02.2009 EG.

The Essential Health and Safety Requirements are assured by compliance with:
EN 50014:1997 + A1 – A2 General requirements
EN 50018: 2000 Flameproof enclosure

If the sign "X" is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.

This EC-Type Examination Certificate relates only to the design, examination and tests of the specified equipment in accordance to Directive 94/9/EC. Further requirements of the Directive apply to the manufacturing process and supply of this equipment. These are not covered by this certificate.

The marking of the equipment shall include the following:

Appendix to

EC-Type Examination Certificate

DMT 02 ATEX E 029 X

15.1 Subject and type
Positioner type Doc. 901132

15.2 Description
The positioner is designed for the transmission of an electrical signal into a pneumatic signal.

Certain variants of the electronics may be used intrinsically safe according to separate certification (see 7.3)

As pressure media neither flammable gases nor oxygen or oxygen enriched gases will be used.

15.3 Parameters
15.3.1 Electrical data
Voltage ≤ AC/DC 30 V
Current ≤ 20 mA
15.3.2 Pneumatic data
Supply pressure ≤ 6 bar
15.3.3 Thermal data
Temperature class T4 T5 T6
Ambient temperature range -40 °C ≤ Ta ≤ 85 °C 80 °C 65 °C

Test and assessment report
BVS PP 02.2009 EG as of 31.01.2002

Special conditions for safe use
17.1 As per 4.3, the positioner is designed for use at an ambient temperature range of –40 °C up to 85 °C at maximum.

17.2 If the positioner is used at an ambient temperature above 60 °C or below –20 °C, cable entries and cable approved for a service temperature corresponding to the maximum ambient temperature increased by 10 K respectively corresponding to the minimum ambient temperature shall be used.

17.3 Variants which, according to separate certification, comply with type of protection intrinsic safety, shall not be used intrinsically safe once they have been used in type of protection flameproof enclosure.

We confirm the correctness of the translation from the German original.
In the case of arbitration only the German wording shall be valid and binding.

Germany

Manufacturing location(s):
ABB Automation Products GmbH
Schillerstraße 72
32425 Minden
Germany

This certificate is issued as verification that a sample(s), representative of production, was assessed and tested and found to comply with the IEC Standard list below and that the manufacturer’s quality system, relating to the Ex products covered by this certificate, was assessed and found to comply with the IECEx Quality system requirements. This certificate is granted subject to the conditions as set out in IECEx Scheme Rules, IECEx 02 and Operational Documents as amended.

STANDARDS:
The electrical apparatus and any acceptable variations to it specified in the schedule of this certificate and the identified documents, was found to comply with the following standards:

IEC 60079-0 : 2000 Edition: 3.1
Electrical apparatus for explosive gas atmospheres - Part 0: General requirements

IEC 60079-11 : 1999 Edition: 4
Electrical apparatus for explosive gas atmospheres - Part 11: Intrinsic safety ‘i’

IEC 60079-15 : 2001 Edition: 2
Electrical apparatus for explosive gas atmospheres - Part 15: Type of protection ‘n’

This Certificate does not indicate compliance with electrical safety and performance requirements other than those expressly included in the Standards listed above.

TEST & ASSESSMENT REPORTS:
A sample(s) of the equipment listed has successfully met the examination and test requirements as recorded in

IECEx ATR: File Reference:
DE/TUN/04/551542 04 YEX 551542
Schedule

EQUIPMENT:
Equipment and systems covered by this certificate are as follows:

The Positioner type TZIDC-xxx is used for the control resp. closed loop control of pneumatic driven valves.
The Positioner type TZIDC resp. TZIDC-200 transfers the reference value by means of an impressed signal
current of 4…20 mA.
The Positioner type TZIDC-110, TZIDC-210, TZIDC-120 resp. TZIDC-220 transfers the reference value via
a field bus signal.
An integrated distance sensor measures the current position of the valve drive. An integrated
current/pressure transformer (I/P) is used for the pneumatic auxiliary power.

The permissible ambient temperature range in dependence on the type, the type of protection and the
Temperature Classes has to be taken from the following table:

<table>
<thead>
<tr>
<th>Temperature Class</th>
<th>Ambient temperature range</th>
</tr>
</thead>
<tbody>
<tr>
<td>T4</td>
<td>-40°C to +85°C</td>
</tr>
<tr>
<td>T5</td>
<td>-40°C to +50°C</td>
</tr>
<tr>
<td>T6</td>
<td>-40°C to +35°C</td>
</tr>
</tbody>
</table>

Additional technical data see EQUIPMENT (continued)

CONDITIONS OF CERTIFICATION: YES as shown below:

Special condition for safe use of intrinsically safe Positioners:
The operation of the local communication interface (LKS) and of the programming interface (X5) is only
allowed outside of the hazardous explosive area.

Special conditions for safe use of Positioners marked Ex nA II T6:
Only devices which are suitable for the operation in explosion hazardous areas declared as zone 2 and the
conditions available at the place of operation are allowed to be connected to circuits in the zone 2.
The connecting and disconnecting as well as the switching of circuits under voltage are only permitted
during installation, for maintenance or repair purposes.
Note: The temporal coincidence of explosion hazardous atmosphere and installation, maintenance resp.
repair purposes is assessed as improbably.
For the circuit "Mechanical digital feedback" measures have to be taken outside the device that the rated
voltage is exceeded not more than 40% by transient disturbances.
Only non combustible gases are allowed to be used as pneumatic auxiliary energy.
Only suitable cable entries which meet the requirements of IEC 60079-15 are allowed to be used.

### (16) Test report PTB Ex 00-29268

### (17) Special conditions for safe use

1. For the application within a temperature range of -60 °C to -20 °C the SN-sensors, types NJ... and SJ... must be protected against damage due to impact by mounting into an additional housing.
2. The connection facilities of the SN-sensors, types NJ... and SJ... shall be installed as such that at least a degree of protection of IP20 according to IEC-publication 60529:1989 is met.
3. The assignment of the type of the connected circuit to the maximum permissible ambient temperature and the temperature class as well as the effective internal reactances for the individual types of SN-sensors is shown in the table given under item (15) of this EC-type-examination certificate.
4. With the application in group IIIC inadmissible electrostatic charge of the plastic housing has to be avoided for following types of SN-sensors (warning label on the device):

NJ 40-FP-SN...

5. Inadmissible electrostatic charge of parts of the metal housing has to be avoided for the following types of SN-sensors. Dangerous electrostatic charges of parts of the metal housing can be avoided by grounding of these parts whereas very small parts of the metal housing (e.g. screws) don’t need to be grounded:

NJ 2-11-SN-G...
NJ 5-22-SN-G...
NJ 6S1+U3+N...
NJ 6S1+U4+N...
NJ 15S+U3+N...
NJ 15S+U4+N...
NJ 20S+U3+N...
NJ 20S+U4+N...
NJ 40-FP-SN-P3...
NJ 40-FP-SN-P4...

(18) Essential health and safety requirements

Met by the standards mentioned above

Zertifizierungsstelle Explosionsschutz
